Project Title: Vivans Educational Consultancy

Abstract

In this project we will develop the ER model as part of conceptual design and realize the ER model into schemas as part of logical design for vivans educuational consultency by identfying the major data reqirments for these consultency in educational domain. We identify the entities like recruitment of employees, assisting admissions for the students into prominent engineering and medical colleges and attributesrequired for educational services are offered by this organization. The relationships like recritment of staff by the consultency, collection of information and posting to the management, relationship between parents and receptionists abut the enqiry made by parents regarding the admissions, relationship between the management and teachers and we apply normalization techniques to the above schemas whenever we needed. We create the tables with cosntraints to the identfied schemas as part of logical design and we insert the relavent data into tables. Finally we write the SQL queries for the following information and generate ten Relavent reports for the vivans educatonal consultency.

Under the esteemed guidance of

Mr. T Ravi Kumar
